Serving the users and supporting the team

About me

My goal is to provide useful products with an extraordinary **user experience** as I'm a technology lover.
My approach is **result-oriented**. I believe in **continuous improvement** and iterative progress measuring qualitative and quantitative data.
Each new feature has the goal to provide benefits and improvement of the quality of life or experience.

Since I was a child, I've been **obsessed with technology,** using my passion for serving people, thus making the world a better place one step at a time.
I continuously develop my skills and the skills of the people around me. My results are strictly linked to the ability of the team I work with; **growing together is better than growing alone**.

Positive critiques contribute to creating a fast-growing environment; transparency is the driver to the comprehension and fruitful collaboration.

Errors are legitimate and never a failure. As Edison stated, after having failed a 1000 trials to invent the lightbulb:
"I never failed, I know several thousand things that won't work!"

Work experience

Since 2017

CEO & founder
Skaffolder Inc. Austin, TX

Our goal is to revolutionize the way of working for developers and IT companies by automating their work and saving valuable time.

This is my most valuable experience. Here I learned how to run a business, build a formidable team, deal with investors and clients.

Skaffolder is a DevOps tool that saves up to 40% of development time. It converts spec to code in any programming language. The code templates are customizable. The user owns the final code with no lock-in. It integrates with OpenAPI 3.0 standard and Docker.

https://www.skaffolder.com

Work experiences

Since 2020

CTO, President & Cofounder
Coronavirus Alert Austin, TX

It is a technological solution to face the COVID-19 emergency. It will soon be the official application of the Bolivian government. It provides contact tracing, stats, official communication channel for the government, network alert.
It is a mobile app for the citizens and an admin web dashboard for the government.

I felt the need to do something to help the world with my available resources.

From 2011 to 2017

Software architect
AlmavivA S.p.A. Rome, Italy

Almaviva is a big System Integrator. I covered the role of software developer and software architect on various projects. I worked on the portal for the "**Ministry of economy and finance**" http://noipa.mef.gov.it, "**Bank of Italy**" portal, "**Trenitalia Spa.**" ticketing portal, **Italian Open Data official website** "https://www.dati.gov.it" and other side projects with a high volume of traffic and SLA.

I followed the Agile and **DevOps** best practices and have used several technologies such as Liferay, AngularJS, React, MongoDB, Struts, Spring, iBATIS, Spring Batch, shell scripts, OracleDB, Oracle Xstream.

Other experiences

I started my very first project at the age of 14. It was a **dropshipping e-commerce** website. It was my first approach to build a business and to work with clients. After an internship at the **INFN - National Institute of Nuclear Physics** in Rome, Italy, I worked at a local PC shop and built many websites for myself and customers. I provided **business advice** to a client to set up their business. I've always been passionate about making business and products that provide a unique user experience.

Many other personal projects and experiences are listed on my personal website: **https://www.lucacarducci.com**
